Questionnaire – Checklist

(Based on ISO/IEC 25010:2023 – Systems and Software Quality Requirements and Evaluation)
Updated from ISO/IEC 25010:2011

Name of the System: Kasama Support Hub Management System

PART I – PERSONAL DATA

Name (optional): _____

PART II – EVALUATION OF THE SYSTEM

Directions: Rate the presentation of each of the criteria by checking the appropriate box to determine the level of acceptability of the System.

Scales:

5 – Extremely Acceptable
4 – Very Acceptable
3 – Moderately Acceptable
2 – Slightly Acceptable
1 – Unacceptable

		5	4	3	2	1
1. FUNCTIONAL SUITABILITY						
1.1	**Functional Completeness.** Degree to which the set of functions covers all the specified tasks and intended users' objectives.		/			
1.2	**Functional Correctness.** Degree to which the System provides accurate results with the needed degree of precision.	/				
1.3	**Functional Appropriateness.** Degree to which the functions facilitate the accomplishment of specified tasks and objectives.	/				
2. PERFORMANCE EFFICIENCY						
2.1	**Time Behaviour.** Degree to which the response and processing times and throughput rates of the System, when performing its functions, meet requirements.	/				
2.2	**Resource Utilization.** Degree to which the amounts and types of resources used by the System, when performing its functions, meet requirements.	/				
2.3	**Capacity.** Degree to which the maximum limits of the System parameter meet requirements.	/				
3. COMPATIBILITY						
3.1	**Co-existence.** Degree to which the System can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other system.	/				
3.2	**Interoperability.** Degree to which two or more systems or components can exchange information and use the information that has been exchanged.	/				
4. INTERACTION CAPABILITY [Updated from "Usability" in ISO 25010:2011]						
4.1	**Appropriateness Recognizability.** Degree to which users can recognize whether the System is appropriate for their needs.		/			
4.2	**Learnability.** Degree to which the System enables the user to learn how to use it with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.	/				

CamScanner

		5	4	3	2	1
4.3	**Operability.** Degree to which the System is easy to operate, control and appropriate to use.	/				
4.4	**User Error Protection.** Degree to which the System protects users against making errors.	/				
4.5	**User Engagement.** Degree to which the user interface presents functions and information in an inviting and motivating manner encouraging continued interaction. [Updated from "User Interface Aesthetics" in ISO 25010:2011]		/			
4.6	**Inclusivity.** Degree to which the System can be used by people of various backgrounds (such as people of various ages, abilities, cultures, ethnicities, languages, genders, economic situations, etc.). [Updated from "Accessibility" in ISO 25010:2011]	/				
4.7	**User Assistance.** Degree to which the System can be used by people with the widest range of characteristics and capabilities to achieve specified goals in a specified context of use. [New in ISO 25010:2023]	/				
4.8	**Self-Descriptiveness.** Degree to which the System presents appropriate information, where needed by the user, to make its capabilities and use immediately obvious without excessive interactions with the System or other resources. [New in ISO 25010:2023]	/				
5. RELIABILITY						
5.1	**Faultlessness.** Degree to which the System performs its intended functions without fault under normal operation. [Updated from "Maturity" in ISO 25010:2011]		/			
5.2	**Availability.** Degree to which the System is operational and accessible when required for use.	/				
5.3	**Fault Tolerance.** Degree to which the System operates as intended despite the presence of hardware or software faults.	/				
5.4	**Recoverability.** Degree to which, in the event of an interruption or failure, the System can recover the data directly affected and re-establish the desired state of the system.	/				
6. FLEXIBILITY [Updated from "Portability" in ISO 25010:2011]						
6.1	**Adaptability.** Degree to which the System can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.	/				
6.2	**Installability.** Degree of effectiveness and efficiency with which the System can be successfully installed and/or uninstalled in a specified environment.	/				
6.3	**Replaceability.** Degree to which the System can replace another specified software product for the same purpose in the same environment.	/				
6.4	**Scalability.** Degree to which the System can be expanded to handle growing amounts of work or its potential to accommodate growth. [New in ISO 25010:2023]	/				
7. SECURITY						
7.1	**Confidentiality.** Degree to which the System ensures that data are accessible only to those authorized to have access.	/				
7.2	**Integrity.** Degree to which the System prevents unauthorized access to, or modification of, computer programs or data.	/				
7.3	**Non-repudiation.** Degree to which actions or events can be proven to have taken place, so that the events or actions cannot be repudiated later.		/			

CamScanner

		5	4	3	2	1
7.4	**Accountability.** Degree to which the actions of an entity can be traced uniquely to the entity.	/				
7.5	**Authenticity.** Degree to which the identity of a subject or resource can be proved to be the one claimed.	/				
7.6	**Resistance.** Degree to which the System can sustain operations while being attacked by a hostile party. [New in ISO 25010:2023]		/			
8. MAINTAINABILITY						
8.1	**Modularity.** Degree to which the System is composed of discrete components such that a change to one component has minimal impact on other components.		/			
8.2	**Reusability.** Degree to which an asset can be used in more than one system, or in building other assets.		/			
8.3	**Analysability.** Degree of effectiveness and efficiency with which it is possible to assess the impact on the System of an intended change to one or more of its parts, or to diagnose the system for deficiencies or causes of failure, or to identify parts to be modified.		/			
8.4	**Modifiability.** Degree to which the System can be effectively and efficiently modified without introducing defects or degrading existing product quality.		/			
8.5	**Testability.** Degree of effectiveness and efficiency with which test criteria can be established for the System and tests can be performed to determine whether those criteria have been met.	/				
9. SAFETY [New characteristic in ISO 25010:2023]						
9.1	**Operational Constraint.** Degree to which the System constrains its operation to within safe parameters or states when facing operational hazards. [New in ISO 25010:2023]		/			
9.2	**Risk Identification.** Degree to which the System identifies risks that could endanger human life, health, property, or the environment. [New in ISO 25010:2023]		/			
9.3	**Fail Safe.** Degree to which the System automatically transitions to a safe mode of operation in the event of a failure or external attack. [New in ISO 25010:2023]		/			
9.4	**Hazard Warning.** Degree to which the System provides adequate warnings of hazards that could cause harm in a timely manner. [New in ISO 25010:2023]		/			
9.5	**Safe Integration.** Degree to which the System safely exchanges information with other systems or components without introducing hazards. [New in ISO 25010:2023]		/

Interview Guide – Questions

(ISO/IEC 25010:2023)

Name of the System: Kasama Support Hub Management System

1. Can the system be improved?

(YES) **NO**

If YES, what are the recommendations you can suggest?

1. Add attachment feature for the follow up
2. Add a student profile upon registering (Organized 1st to 4th year Students)
3. Add a profile for Coach Hannah
4. Update CSS color into darker color to lessen eye strain.

---

2. Please state the challenges encountered in the _____ System.

None.

---

3. What other suggestions can you provide to improve the system?

None.
